BAMBINOS.LIVE

AI Program Manager (Sales) — Take-Home Case

AI-Powered Post-Demo Conversion & Call Intelligence Pipeline

A practical, data-grounded prototype covering call quality audits, CRM normalization, lead intent, compliance guardrails, personalized follow-up drafts and revenue impact.

Prepared using the supplied Sales track dataset: 12 CRM leads, 11 demo evaluations, 6 call logs, 6 payment/order rows and 6 call transcripts.

Prototype status: Offline analysis and simulated workflow design. No live CRM or WhatsApp messages were sent.

1. Executive Summary

Bambinos' Demo-to-Enrollment funnel has three operational risks: low call-audit coverage, vague CRM dispositions, and generic follow-ups that ignore the child's demo evidence and parent's actual objection. This proposal combines call transcripts with CRM, demo, payment and policy data to create an evidence-backed sales intelligence layer.

The supplied sample was reviewed across 12 CRM leads and six recorded calls. The most material findings are: a critical compliance incident on LEAD-803; a paid order not reflected in CRM for LEAD-804; failed payments requiring support on LEAD-805 and LEAD-809; child-welfare/batch-fit concerns on LEAD-806; uncalled high-intent leads LEAD-807 and LEAD-812; and duplicate LEAD-811 matching LEAD-801.

The system should augment counsellors, not police them: AI prepares evidence and next-best actions; humans approve sensitive or commercially consequential actions.

2. Deliverable A — Sales Discovery & Evaluation Framework

Parent psychology and sales principles

Parents are buying a credible learning outcome and a safe, age-appropriate experience for their child—not simply a number of classes. The counsellor should connect the educator's observed demo moment to a specific learning gap, explain the teaching method, address practical constraints, and earn trust. In international markets, local currency, time zones, curriculum context and payment authentication matter. The sample includes India, UAE/GCC, USA and UK cases; the workflow must preserve those local contexts rather than use one generic script.

100-point call quality scorecard

Dimension	Max	What good looks like
Rapport & child-specific empathy	15	Uses child's name and real demo evidence; listens without pressure.
Parent discovery & diagnosis	20	Finds parent goal, learning concern, decision process and constraints.
Demo evidence & learning-gap linkage	20	Accurately explains strengths, gap and magic moment from educator notes.
Curriculum/value explanation	15	Connects teaching method and outcomes to the identified gap; no unsupported claims.
Objection handling & trust	20	Addresses price, spouse, schedule, competitor or child-fit concerns honestly.
Ethical next step	10	Agrees a clear next action; no coercion, fake scarcity or false guarantees.

CRM taxonomy

Required fields: lead_intent (Hot/Warm/Cold/Enrolled/Duplicate), intent_score_1_to_10, primary_objection_bucket (Price/Value, Spouse Decision, Schedule, Child Not Interested/Batch Mismatch, Competitor, Payment Failure, Trust/Compliance, Unknown), secondary_objection_bucket, demo_highlight, learning_gap, payment_status, recommended_crm_stage, next_best_action, stop_sales_followup, duplicate_of, evidence_source_ids.

Scoring rules: Hot 9–10 for explicit intent or strong uncalled buying signals; Warm 6–8 for positive interest with a solvable blocker; lower scores for weak/negative intent. Paid orders override sales intent and become Enrolled_Paid. Failed payment routes to support rather than Cold. Explicit do-not-contact and duplicate records suppress promotional outreach.

3. Deliverable B — Workflow & Guardrails

Pipeline

Recording ends → consent/recording check → speech-to-text → join transcript with CRM/demo/order/policy by lead_id and class_id → AI extraction and call audit → deterministic validation → CRM update → payment/compliance safety gate → counsellor coaching alert and approved WhatsApp draft → human approval → WhatsApp Business API.

Human-in-the-loop and compliance

Auto-populate low-risk CRM fields and draft coaching notes, but require human approval for discounts, refunds, payment disputes, schedule/batch promises, child distress, low-confidence extraction and all compliance alerts. Promotional WhatsApp requires valid opt-in, approved template/window, local-time controls and frequency caps. Never send a sales nudge to a paid lead, a do-not-contact parent or a duplicate lead.

Hard-stop rules

Paid order → Enrolled_Paid and stop sales cadence. Explicit do-not-contact → suppress. Discount beyond policy cap or unauthorized link → compliance hold. Failed payment → support queue. Child distress/age mismatch → academic review, no payment CTA. Any guarantee, refund promise, scarcity claim or 1:1/group-size claim not supported by policy → block and escalate.

4. Deliverable C — Prototype Results

The included result files are analyst-reviewed, deterministic outputs grounded in the supplied source tables and transcripts. They are not claimed to be generated by a live LLM or sent through live integrations. See the repository prompts for the intended production AI contract.

Six recorded call audits

Lead	Score	Main finding / action
LEAD-801	88/100	No critical flags — Strong discovery, validates joint decision, links demo moment to spouse concern, agreed specific follow-up. Minor: provisional seat hold should be factual/verified.
LEAD-802	48/100	Premature price dump; weak diagnosis; unsupported urgency/discount claim — Opened with packages before diagnosing learning gap; parent explained word-problem issue; rep did not explain Bar-Model result. Claimed AED 100 discount and 30-minute expiry; verify discount authority and inventory.
LEAD-803	8/100	CRITICAL: false rank/reading guarantee; unauthorized 42.1% discount; false 6-month refund; false 1:1 claim; coercive blacklist threat; do-not-contact request — 84% rep talk time and 95-second monologue. Multiple explicit policy violations. Parent said do not call again. Escalate immediately; suppress sales contact.
LEAD-804	92/100	Payment-state mismatch / stale CRM stage — Excellent child-specific value explanation and schedule resolution. Parent stated intent to pay after meeting; payment later succeeded. Order confirms Paid USD 265 at 11:40 PST; CRM must be Enrolled_Paid and all sales follow-ups stopped.
LEAD-805	82/100	Failed payment needs support; exam timing remains a consideration — Good discovery, validates competitor comparison, explains peer learning and approved 10% discount/installments. Payment attempt failed due to UPI mandate OTP timeout. Send support-oriented retry only, not generic sales pressure.
LEAD-806	18/100	Child welfare ignored; false 40% outcome claim; coercive language; unsupported offer; checklist gaming — Rep mechanically reads checklist, ignores child distress and age mismatch, claims IQ/maths improvement by 40% without evidence, says force child to attend. Escalate to manager; academic team must confirm micro-batch/bridge session.

CRM-wide pipeline findings

LEAD-807 and LEAD-812 are high-intent demo leads without call logs and should be prioritized. LEAD-811 is a duplicate of LEAD-801 based on shared student_id/user_id/mobile. LEAD-804 paid USD 265, but CRM remained at Payment_Link_Sent. LEAD-805 and LEAD-809 have failed payments and need payment support. LEAD-810 has a next_followup_at earlier than last_call_at. LEAD-802's order record says AED 12,000 standard and AED 1,100 net after AED 100 discount, while the official policy lists AED 1,200; finance/ops must reconcile the currency/amount before quoting or issuing a link.

Critical compliance case — LEAD-803

The transcript contains a guaranteed school rank and Harry Potter reading claim in 30 days, a six-month full-refund promise contrary to the published 14-day/attendance-based policy, a 42.1% discount against a 10% cap without approval, a 1:1 claim for a group product, and a threat to blacklist a child if payment is not made in five minutes. The parent explicitly requested no further calls. Recommended response: immediate compliance escalation, preserve call evidence, invalidate the unauthorized payment link, and suppress all promotional outreach.

Follow-up outputs

Three-touch WhatsApp drafts are provided for eligible leads and tailored to demo highlights and objections. LEAD-803, LEAD-804, LEAD-806 and LEAD-811 receive explicit STOP/HOLD instructions instead of promotional copy. LEAD-805 and LEAD-809 receive payment-support language only. All drafts require consent, template, local-time and human approval checks before sending.

5. Deliverable D — Revenue Impact, Adoption & Rollout

Funnel math

At 1,000 demos/week and 15% baseline conversion, baseline enrollments are 150/week. A 2 percentage-point lift to 17% yields 170/week (+20); a 3-point lift to 18% yields 180/week (+30). This is an additional 80–120 enrollments per four-week month, or 1,040–1,560 per 52-week year. Incremental revenue = incremental paid enrollments × average net revenue per enrollment. This avoids inventing an average order value not provided in the brief.

Manager time assumption

Illustrative assumption: current 2% manual audit rate means 20 calls/week; at 25 minutes listening plus 5 minutes note-taking each, managers spend about 10 hours/week. With AI screening of all calls and human deep review limited to 20 exception/high-risk calls at 5 minutes each, manager review becomes about 1.67 hours/week, saving approximately 8.33 hours/week (about 33.3 hours per four-week month). Actual savings must be validated in pilot; AI does not replace required investigation.

30-60-90 day rollout

Days 1–30: Pilot with one sales pod; validate join keys, policy rules, scorecard consistency and suppression gates; keep every message human-approved. Days 31–60: Expand to all counsellors; weekly calibration of AI scores with managers; coach from evidence-based examples; measure audit coverage, CRM completeness, follow-up response and payment recovery. Days 61–90: Integrate CRM/telephony/WhatsApp APIs after security and consent review; automate low-risk CRM updates and approved templates; monitor conversion lift, false positives, complaint rate and opt-outs.

Rep adoption strategy

Position the system as a personal co-pilot that remembers demo details, drafts better follow-ups, recovers failed payments and protects reps from missed tasks—not as a surveillance score. Share each rep's own coaching insights privately, involve top counsellors in scorecard calibration, allow evidence-based score appeals, and reward adoption and conversion quality rather than raw message volume.

6. Limitations & Next Steps

The supplied data support six call audits and 12 CRM lead reviews, but not causal claims that the proposed system will achieve a conversion lift. The case does not provide average net revenue per enrollment, manager audit time measurements, opt-in records or API credentials. These must be collected during pilot. The output repo includes prompts, data, CSV/JSON results, workflow diagram and a reproducibility script; live CRM and WhatsApp execution is intentionally not represented as completed.

Appendix — Included artifacts
